

MONSOON BLINDS

WINDOW TECHS

— BRINGING LIGHT TO LIFE —

Bring the outside, inside, with the help of **UV stabilized clear PVC transparent monsoon blinds** that keep the water away. Our monsoon blinds are made using high-quality **Japanese PVC material** and are offered in three different thicknesses - **0.5mm, 0.63mm and 1.80mm**. These custom fit blinds withstand Indian tropical weather effects such as rain, wind, harsh glare or heat. This helps in keeping the interior comfortable and unaffected. The blinds themselves are sturdy, yet easy to handle and maintain.

APPLICATION OF MONSOON BLINDS

Our rain and wind protection system can be effectively used in resorts, beach clubs, farmhouses & outdoor dining spaces. The use of strong & robust hardware system allows the blind to withstand strong sea wind on beach front resorts while maintaining the outside view.

Manufactured using transparent high-quality Japanese PVC material, this will prevent water entering your space and thus help in protecting your interiors. At the same time, the use of clear acrylic plastic prevents the view from being blocked.

The monsoon blind system is offered in both roman and roller variety.

HIGH PERFORMANCE

The outdoor monsoon blinds withstand the harsh tropical conditions of India. A popular choice for patios and entertainments areas, the blinds are a perfect balance of remarkable quality & fine design.

The product is offered in both **manual & motorized control options**. With no compromise on quality, the use of **UV stabilized PVC material** prevents the blind from turning pale/yellow even after prolonged use
